14. Types of the derivative financial instruments, their risks, quantitative limits and methods that are used to evaluate the collective investment undertaking risk related to transactions of derivative financial instruments are provided in Clause 11 of the Annex. Methods by which the derivative financial instrument can protect the transaction (position) of investment instruments against risk:

During the reporting period Subfund has used currency forwards. The purpose of these contracts is to manage currency risk. As a result, Subfund investment and Subfund unit price volatility was reduced and the similar performance in the local currency terms was achieved.

While buying forward contracts, which are traded in the over the counter market, Subfund carry credit risk exposure of forward contracts counterparty. This is the risk that counterparty will not be able to fulfill its financial obligations for the Subfund. The risk is managed by limiting the total exposure (can not exceed 20% of funds' net asset value) of forward contracts with one counterparty.

15. Total value of liabilities resulting from the transactions of derivative financial instruments at the end of the reporting period:

Category of financial instruments	Value of liabilities the end of the reporting period	Currency	Comments

- 16. Risk extent for derivative financial instruments accepted by the master collective investment undertaking after transactions:
- 16.1. The sum of the direct potential risk extent of the feeder collective investment undertaking and the actual derivative financial instruments risk of the master collective investment undertaking that is proportional to the feeder collective investment undertaking investments to the master undertaking:

The collective investment undertaking is a non-master investment undertaking.

16.2. The sum of the direct potential risk extent of the feeder collective investment undertaking and the extent of potential maximum risk that was taken by the master collective investment undertaking according to transactions on derivative financial instruments and that was determined in the founding documents of the master collective investment undertaking and that is proportional to the feeder collective investment undertaking investments to the master undertaking:

The collective investment undertaking is a non-master investment undertaking.

17. Provide an analysis on how the investment instruments portfolio complies (does not comply) with the investment strategy of the collective investment undertaking (direction of investments, specialization of investments, geographical area, etc):

The investment portfolio of the Subfund complies with the Fund investment strategy.

Managers harmonize more risky (companies' bonds) and safer (government and municipal bonds) investments of subfund, striving to achieve balanced investment return. Subfund invests without limits to any industry or sector in Central and Eastern Europe region. Subfund mainly invests in the medium term bonds. Derivatives are used to manage risks.

18. Name the factors that were most influential on the structure and value changes of the investment instruments portfolio during the reporting period:

Subfund's investment portfolio value index was influenced by the emerging European government and corporate bond prices.

V. INVESTMENT RETURN AND RISK INDICATORS OF THE COLLECTIVE INVESTMENT UNDERTAKING

19. Comparative index (if selected) and a brief description of it:

Information provided in the annual report.

20. Change in the value of investment instruments (shares) of the same period, annual return (gross and net) on the investment instruments portfolio and change in the value of the comparative index (if selected) and other indicators over the last ten years of operation of the Fund:

Information provided in the annual report.

21. The average return on investments, the average change in the value of investment instruments and the average change in the value of the comparative index (if selected) over the last three, five and ten years (the average net return on investments, the average change in the value of investment instruments and the comparative index are calculated as the respective geometric averages of annual net investment return, change in the value of the investment instrument and the comparative index):

Information provided in the annual report.

22. Other indicators revealing risks related to the investment instruments portfolio:

Information provided in the annual report.

VI. FINANCIAL CONDITION OF THE COLLECTIVE INVESTMENT UNDERTAKING

23. Financial statements of the collective investment undertaking are prepared in compliance with the laws and requirements of the legal acts of the Republic of Lithuania:

23.1. Statement of Net Assets:

No.	Assets	Note No.	Financial year	last financial year
A.	ASSETS		37.190.134,94	33.693.391

Phone number	+370 5 239 23 00

Reporting period

1 January 2013 - 30 June 2013.

23.3.2. Accounting policy:

Legislation used in the preparation of the financial statements

The financial reports were prepared in accordance with the following legal acts:

- Law on Accounting of the Republic of Lithuania;
- Law on Financial Statements of Entities of the Republic of Lithuania;
- Law on Collective Investment Undertaking of the Republic of Lithuania;
- Business Accounting Standards of the Republic of Lithuania

The Subfund's assets are denominated in litas, so investments could be made in different foreign currencies. The Management Company plans to use derivative financial instruments to avoid losses due to adverse effects of exchange rate fluctuations.

The Subfund financial year is the calendar year. The Sunfund's financial statements are prepared within four months of the end of the financial year.

The Management Company keeps accounts and all amounts in these financial statements provides in the national currency of Republic of Lithuania – litas. Since 2 February 2002, the litas has been pegged to the euro at a rate of 3.4528 litas to 1 euro. The exchange rate of litas with respect to other currencies is set daily by the Bank of Lithuania.

Investment policy and structure of the investment portfolio

The Subfund's goal is to ensure sustainable growth of its assets. Up to 100 percent of the Sub-Fund's assets are invested in developing and the most promising European government and corporate debt securities. There are harmonized riskier (corporate bonds) and safer (government bonds) investments in the Subfund, in order to protect the value of the property and to ensure the smooth Subfund's return on investment.

Subfund's assets are invested in Central and Eastern Europe. Subfund's investments are not limited to a particular industry. The Subfund may invest in bonds which have different periods and the credit rating.

If the situation unable to offer better investment opportunities in the market, up to 100 percent Sub-Fund's assets may be invested in deposits, money market instruments and in regulated collective investment undertakings (shares) in which the main investment trends - money market instruments or bonds, and other forms of non-equity securities. Subfund's assets may be invested in derivative financial instruments, if they are used to manage the risk.

The probability is low, that the portfolio composition or the portfolio management techniques may result net asset value volatility in the Subfund.

Financial risk management policy

The Subfund's assets are invested in the financial instruments listed below, in accordance with its objectives and investment policy:

 shares, depository receipts with respect to shares and harmonised investment instruments (shares) of collective investment undertakings, whose primary investment trend – stocks, depository receipts in respect of shares;

FINASTA EMERGING EUROPE BOND SUBFUND SEMI-ANNUAL REPORT JANUARY- JUNE 2013

- bonds and other forms of non-equity securities, as well as harmonised investment instruments (shares) of collective investment undertakings, whose primary investment trend – bonds and other forms of non-equity securities;
- other securities that give the right to acquire or transfer transferable securities or determinant cash settlements, set according to transferable securities, currencies, interest rates, yield, market commodities or other indices or instruments;
- other regulated investment instruments (shares) of collective investment undertakings, whose primary investment trend – transferable securities, raw materials, market commodities, currencies, interest rates, yields, and other indices;
- special collective investment undertakings (alternative investments, private capital, real estate) and collective investment undertakings that are not regulated by the Law on Collective Investment Undertakings of the Republic of Lithuania (investing directly in market commodities, raw materials, currencies, etc.);
- money market instruments and investment instruments (shares) of harmonised collective investment undertakings, whose primary investment trend – money market instruments;
- deposits in credit companies;
- derivative financial instruments associated with the above financial instruments, financial indices, interest rates, currencies or currency rates, if they are used for risk management.

The composition of the Subfund's portfolio must meet the investment portfolio diversification requirements and investment restrictions of the Law on Collective Investment Undertakings of the Republic of Lithuania.

The Subfund's financial risk is managed by diversifying the investment portfolio in accordance with principles laid down in the Fund's rules.

The Investment Committee, which makes decisions on the composition of the Subfund's investment portfolio, must take into account the portfolio's current risk status and the impact of investment decisions on this status. The Subfund's portfolio risk is assessed periodically and provided to the Investment Committee meeting at least once per quarter of the calendar year.

The Subfund's investment portfolio risk is assessed with respect to the portfolio's securities:

- the issuer's credit rating;
- price sensitivity to interest rate changes;
- historical and expected price fluctuations of the nominal currency;
- duration;
- vield;
- the value of securities in the investment portfolio.

Among group companies that determine the consolidated financial accountability, no more than 20 per cent of the Subfund's net assets may be invested in issued transferable securities and money market instruments.

Any of the issuer's shares that belong to the Subfund in conjunction with the Management Company and other concerted collective investment undertakings managed by the Management Company may not give more than a tenth of total voting rights in the issuer's general meeting of shareholders.

The Subfund may acquire no more than:

- 10 per cent of all the issuer's non-voting shares;
- 10 per cent of all the issuer's bonds and other forms of non-equity securities;
- 25 per cent of the investment instruments or shares of other collective investment undertakings;
- 10 per cent of a single issuer's issued money market instruments.

The Management Company reviews the investment strategy at least once every 3 years and changes it where necessary.

Recognition principles for increases and decreases in assets and liabilities

The net asset value (NAV) is calculated as follows:

- the value of property (assets);
- the value of liabilities;
- the difference in the values of property (assets) and liabilities shows NAV.

Calculations of the value of assets and liabilities are based on their fair value. This represents NAV, at which they are most likely to be sold.

Liabilities are calculated in compliance with Business Accounting Standards.

The Subfund's asset (or a part of it) shall be written-off only if:

- the rights to the asset (or a part of it) are realised;
- the rights have expired or the right are transferred.

The liabilities (or a part of it) must be written-off only when they vanish, i.e. when the liabilities of the Subfund expire, are fulfilled or annulified.

When calculating NAV, the value of assets and liabilities denominated in foreign currencies is estimated in accordance with the Bank of Lithuania's established official exchange rate between that currency and litas that prevails on the valuation date.

Rules for the deduction accumulation company and depositary

The salary due to the Management Company for the Subfund's management shall be paid from the Subfund's resources.

The salary of the Management Company consists of:

 an asset management fee – no higher than one (1 %) per cent of the Subfund's average annual NAV.

The salary payable to the Management Company for the Subfund's instrument distribution and conversion is not included in the management fee (a conversion fee is applied to change one subfund's instruments into another subfund's instruments):

- The Subfund's selling price for an investment instrument is equal to the instrument's value and no higher than two (2) per cent of the payment to cover distribution costs;
- The Subfund's replacement cost for an investment instrument is equal to the instrument's value and no higher than 0.25 per cent of the payment to cover replacement costs.

Distribution / conversion charges, which are included in the Subfund's investment instrument purchase / conversion price, pay the Member pursuant to the Fund's purchase-sale agreement for instruments.

Distribution and exchange fees are not included in calculations of NAV.

FINASTA EMERGING EUROPE BOND SUBFUND SEMI-ANNUAL REPORT JANUARY- JUNE 2013

The salary for the Management Company is calculated on an accumulation basis every day of the Subfund's NAV and an increase of the Subfund's instrument value on that day, in line with the principle of simultaneity. The salary for the Management Company is paid monthly until the 10th (tenth) calendar day of the following month.

At the end of the calendar year, an amount shall be adjusted for the management's salary. During the year, overpayments within 30 (thirty) calendar days of the end of the year are returned to the Subfund, and the resultant debts must be repaid to the Management Company within 30 (thirty) calendar days after the end of the financial year.

Overpayments repaid by the Management Company to the Subfund are increased by the Subfund's NAV.

A salary for the depositary and services provided under the depositary contract shall be paid from the Subfund's resources and cannot exceed 0.5 (five-tenths of a) per cent of the Subfund's average annual NAV.

The salary for the depositary consists of:

- custody of the Subfund's assets, calculated by the accumulation principle every day of the Subfund's NAV. The salary is calculated on the basis of actual number of working days in the year;
- the movement of financial instruments in accounts, which is calculated on the basis of each business day on which operations were executed in financial instrument accounts.

The salary for the depositary is paid for each quarter of the preceding year until the 10th (tenth) day of the following quarter.

The amount of remuneration of assets in custody shall be adjusted at the end of the calendar year. During the calendar year, resulting overpayments for assets in custody within 30 (thirty) calendar days after the end of the financial year shall be returned to the Fund, and the Fund's resulting debts must be repaid to the depositary within 30 (thirty) calendar days of the end of the financial year.

The overpayment amount repaid to the Subfund is increased by the Subfund's NAV.

Investment evaluation methods and frequency of revaluation of investments

The fair market value of instruments traded on regulated markets in the Baltic countries (in Riga, Tallinn and Vilnius stock exchanges) is determined by the average market price of instruments traded in regulated markets on the publicly-announced valuation date. The fair value of instruments traded on the markets, other than those specified above, is determined by the closing price, except when:

- instruments are quoted on several regulated markets. In this case, the fair value is determined on the basis of data on the regulated market where trading of these financial instruments was more intense;
- under the given criteria, it is impossible to reasonably choose a market on the basis of data to determine the fair value of the instrument. In such a case, data is used from the regulated market where the issuer's registered office of the instrument is;
- the instrument has not been quoted during the last trading session. In this case, to determine the fair value is used the last known price. This price should be from no more than 30 calendar days prior to the former average market price or closing price, if no events have occurred since the last trading day for which the current market price is significantly lower or higher than the last known price;

FINASTA EMERGING EUROPE BOND SUBFUND SEMI-ANNUAL REPORT JANUARY- JUNE 2013

- the instrument has not been quoted for more than 30 calendar days prior to the valuation date, or was quoted less than is established in the value calculation procedures of the Management Company's net asset fund, the real value of the financial instrument is determined by the last average price in the mid-market;
- when there is no supply of the financial instrument in the regulated market, the financial instrument is accounted for its demand price. If there is no demand of the financial instrument in the regulated market, the financial instrument is accounted for its supply price divided by two.
- when a certain company moves from the trade lists in the regulated market (the shares are removed from the list) or there are neither demand of the financial instrument nor supply price in the regulated market, the financial instrument is evaluated considering the net profit (for one share) ratio of one or several similar companies that is multiplied by the evaluated company's net profit for one share.

Financial instruments not sold in regulated markets are evaluated as follows:

- shares, depository receipts on shares:
- if it is possible to evaluate reasonably that the financial instrument is not liquid, it is evaluated considering the ratio of the net profit for one share (using the average weighted number of ordinary shares that were in circulation for a certain period of time) of other similar company(s) that is multiplied by the evaluated company's profit for one share and providing a discount for asset illiquidity;
- when it is impossible to reasonably assess the value of the financial instrument by the said method, the real value of the financial instrument can be assessed by an independent business valuator who has the right for such activity if the evaluation took place no later than one year and if there were no essential changes after the evaluation due to which the present market price is significantly lower or higher compared to the evaluated by the evaluator; or is evaluated by a likely sale price determined by a chosen evaluation model that is defined in the calculation requirements of the Management Company's net assets of managed funds and that is universally applied and recognised in the finance market.
 - Bonds and other form non-equity securities are evaluated according to the calculation requirements of the Management Company's managed net assets of funds. In order to evaluate the value of these financial instruments as accurately as possible, bonds and other form non-equity securities are evaluated using the following methods (order of priority):
- The instruments that will be redeemed during more than a year are evaluated according to the formula provided in the Subfund's rules. The Subfund's rules are available on the internet, www.finasta.com.
- The instruments that will be redeemed during less than a year are evaluated according to the formula provided in the Subfund's rules. The Subfund's rules are available on the internet, www.finasta.com
- The yield of the financial instruments of the Republic of Lithuania is determined by the yield average as for that day the best buying (lowest BID) sale (highest ASK) for a certain issue offered by at least three primary dealers (e.g. SEB bankas AB, DnB Nord bankas AB, Swedbank AB, bankas Finasta AB);
- The financial instrument is evaluated by a method of accrued interest (amortising the value of a financial instrument);
- The real value of foreign bonds and other form non-equity securities is determined by the net assets calculation requirements of the Management Company's managed funds.

- The value of a derivative financial instrument is determined by a likely sale price determined by the chosen evaluation model that is defined in the calculation requirements of the Management Company's net assets of managed funds and that is universally applied and recognised in the finance market.
- CIU items (shares) assessed by the last publicly announced redemption price;
- Money market instruments that have reached redemption maturity or with a remaining time of no longer than 397 days or those whose yield regularly is adjusted in line with money market conditions at least once per 397 days, or whose risks, including credit and interest rate risks, are very similar to the risks of financial instruments with a redemption maturity and yield that meet the above characteristics.
- The fixed-term deposits are evaluated by the value of amortised cost;
- Cash and assets in credit companies, except the fixed-term deposits, are evaluated by the nominal value;
- Other asset is evaluated by the most likely sale price determined by a chosen evaluation model
 that is defined in the calculation requirements of the Management Company's managed net assets
 of funds and that is universally applied and recognised in the finance market.

Rules for investment item value evaluation

The initial value of the Subfund's item is 100 (one hundred) litas.

The Subfund's NA value is being calculated every day according to the NAV calculating methodology confirmed by the Securities Commission of the Republic of Lithuania and according to calculation requirements of the Management Company's net assets of managed funds that were confirmed by the Board of the Management Company.

The Subfund's item value is assessed by dividing the Subfund's NAV by the number of all the Subfund's items in circulation. The total value of all items of the Subfund is always equal to the NAV of the Subfund. The Subfund's item value is calculated leaving four decimal places and is rounded according to mathematical rounding rules.

The currency that is used for calculation of the Subfund's NAV and item value is litas.

The Subfund's NAV and item value during the running day are announced by the 12.00 of the subsequent business day on the internet www.finasta.com.

Cash and cash equivalents

The cash is considered to be the money in the Fund's accounts. Short-term deposits (up to 3 months) are admitted as cash equivalents. Term deposits are accounted for nominal value, accumulating the interest following the linear method until the end of the term.

Cash and cash equivalents that are nominated in a foreign currency are evaluated by the national currency of the Republic of Lithuania according to the official exchange rate provided by the Bank of Lithuania on the day of assessment.

Post-balance events

After the end of the reporting period, there were no important post-balance events.

22.3.3. Comments on Explanatory Letter:

Note 1. Net assets, investment items and value

Information is provided in the report's Clause 5.

Note 2. Number and value of the distributed and redeemed investment items

Information is provided in the report's Clause 6.
