Financial risk management

Multi-currency risk

AS ELKO Grupa operates internationally and is exposed to foreign exchange risk arising from primarily with respect to US dollar and euro. Foreign exchange risk arises from future multi-currency transactions and recognition of assets, liabilities and long-term investments in various currencies.

The purchase of goods from vendors is predominantly done in US dollars and the sales from the Company to subsidiaries are done in US dollars. The sales to customers in Latvia, Estonia and Lithuania are carried out in the respective local currencies, which are pegged to euro.

The Company has shareholding in foreign currencies and is therefore exposed to foreign currency risk when financial assets and liabilities denominated in foreign currencies are translated into the presentation currency – Latvian lats.

The sales of the Company are mainly in US dollars accordingly to minimize the currency risk the financing is also in US dollars.

Interest rate risk

AS ELKO Grupa uses current borrowing for financing part of its current assets. All the borrowings are at floating rate that exposes the Company to interest rate risk.

Credit risk

Credit risk arises from the credit exposure to outstanding trade receivables. AS ELKO Grupa has implemented procedures and control mechanisms to manage credit risk. Credit risk is partly minimized through credit risk insurance that the Company started using in August 2006 and conservative credit monitoring policies. Individual risk limits are set based on internal or external ratings in accordance with the credit policy. The utilization of credit limits is regularly monitored.

Inventories

AS ELKO Grupa determines the amount of inventories based on the expected future demand and market saturation. Any changes in the demand and/ or rapid obsolescence of the products or technological changes will result in excess stock and accumulation of obsolete items. The Company makes centralized plans for purchase and sale of the products and the procedures for ordering of the goods help to decrease the inventory days. Weekly inventory analysis decreases the need to establish provisions for obsolete items.

The risk related to product flow management is partially reduced through price protection arrangements under the cooperation agreements with major vendors. The agreements provide for compensation for the price reduction in case of decline of the market prices for the goods at the Company's warehouse or that are already ordered.

Liquidity risk

Prudent liquidity risk management includes maintaining sufficient cash, the availability of funding from an adequate amount of committed credit facilities. In future the Company's management plans to increase the liquidity reserve based on the expected cash flows by improving the management of working capital.

Management report (cont'd)

Prospects

The Company's performance is and will be influenced by macroeconomic, competition and political situation and developments of markets where the Company has cooperation partners. The key factors driving the Company's growth was the increase in demand in the markets where the Company operates that were mainly affected by rapid economical development as well as comparatively low use of computers. The other factors include inflow of the EU structural funds and increase in local productivity of the Baltic and Eastern European companies as well as reforms in the government sector in the CIS region.

The Company believes that the above-mentioned factors will help to sustain continuous growth also in the coming years, ensuring positive results of our operations. At the same time in the light of the overall market condition as well as forecasted worldwide economical recession, currently a slowdown in demand growth has been observed, that possibly can result in decrease of the sales volumes and the profitability indicators in future.

The management believes that the Company will mitigate the negative aspects from current economical condition affecting the Company by utilizing the wide geographical distribution network in nine countries where the Company operates as well as centralized management structure.

Events after balance sheet date

There are no subsequent events since the last date of the reporting period, which would have a significant effect on the financial position of the Group as at 31 December 2008.
